Introduction to ERM[®]

Introducing a new brand of certified reference materials

Three major European producers have combined forces to introduce a new brand of certified reference materials to ensure reliability and comparability of the results of measurements.

ERM[®] are certified reference materials, which undergo uncompromising peer evaluation and offer highest quality and reliability.

They are a major tool for improving the confidence in, and the mutual recognition of test results and certificates in a global market. ERM[®] branded materials comply with modern metrological requirements, thus ensuring traceability of measurement results.

What is the ERM[®] concept?

The ERM[®] concept is a joint collaboration of three European reference materials producers who guarantee to:

- Use the most advanced principles currently available described in ISO Guides 34 and 35 for the production of certified reference materials (CRMs)
- Demonstrate rigorous homogeneity and stability for all materials and guarantee the certified value for every single unit over the complete shelf life of the materials
- Be transparent in their approaches to the production of certified reference materials.

Who are the partners?

Present partners of the ERM[®] concept are three major European reference materials producers:

- Joint Research Centre, Institute for Reference Materials and Measurements (JRC-IRMM) of the European Commission's Directorate General Joint Research Centre, Belgium
<http://irmm.jrc.ec.europa.eu>
- Bundesanstalt für Materialforschung und -prüfung (BAM), Germany
www.bam.de
- LGC Standards, United Kingdom
www.lgcstandards.com

What are the key benefits of the ERM[®] concept for CRM users?

- Uncompromising peer-review of CRMs by the ERM[®] Technical Committee ensures highest quality and reliability
- Full transparency of the certification principles and the evaluation report provides valuable insight to help analysts get the maximum benefit from the use of the material
- Clearly defined and stated traceability of the certified values ensures applicability of the materials to the respective analytical problem
- Internationally recognised values underpinned through the participation of the producing institutes in key comparisons organised by the Bureau International des Poids et Mesures.
